## PROFESSIONAL SUMMARY

DevOps / Platform Engineer with 3+ years building cloud-native infrastructure on AWS and Azure. Specializes in Amazon ECS (EC2 for test, Fargate for production), EKS, and Kubernetes (K3s, AKS) — comfortable operating both managed container platforms and self-hosted orchestration. Proficient in Terraform IaC, GitHub Actions CI/CD pipelines, and delivering containerized microservices at scale across multi-environment architectures. Experienced across the full delivery lifecycle — from infrastructure provisioning (VPC, RDS, SQS, SNS, ALB, CloudFront) and container orchestration to observability stacks and security-left SAST integration. Complementary backend skills in FastAPI (Python).

## PROFESSIONAL EXPERIENCE

### DevOps Engineer, System Spec Whatadeal Limited

2024 – present  
Lagos, Nigeria

- Engineered a **multi-product cloud platform** on AWS, supporting **30+ microservices** across three product verticals (e-commerce marketplace, e-ticketing, and travel) with dedicated infrastructure per environment (test and production).
- Authored and maintained **10+ reusable Terraform modules** (ECS, ECR, S3, SQS, SNS, RDS, VPC, ALB, CloudFront, IRSA) to enforce consistent, repeatable infrastructure provisioning and reduce service onboarding time from days to hours.
- Designed **end-to-end CI/CD pipelines** using **GitHub Actions** that automated the full delivery lifecycle: code checkout → Docker image build → push to **Amazon ECR** → ECS task definition rendering → blue/green deployments to **Amazon ECS** with service stability checks.
- Managed containerized workloads on **Amazon ECS (Fargate)** with service discovery, auto-scaling policies, CloudWatch log groups, and secret injection via **AWS Systems Manager Parameter Store** for secure credential management.
- Provisioned and managed **Amazon RDS (PostgreSQL)** databases, **SQS queues** with dead-letter queue (DLQ) configurations, and **SNS topics** for event-driven inter-service communication in a microservices architecture.
- Integrated **SAST (Static Application Security Testing)** scanning and **Playwright** end-to-end testing into the CI/CD pipeline to shift security and quality assurance left in the software delivery process.

### DevOps / Infrastructure Engineer, Fraudwatch360

2026  
Lagos, Nigeria

- Designed and managed a **containerised microservices platform** on Azure, orchestrating 12+ Docker containers across frontend (web-dev, web-prod), backend API, AI service, and supporting infrastructure components.
- Built and maintained a **CI/CD image delivery pipeline** using Azure Container Registry (ACR) to version, store, and deploy Docker images across development and production environments with zero-downtime deployments.
- Implemented a full **observability stack** comprising Prometheus, Grafana, Loki, Promtail, cAdvisor, and Node Exporter — enabling real-time metrics collection, log aggregation, and infrastructure dashboarding across all services.
- Managed **multi-environment service isolation** (sandbox, dev, prod) with dedicated port mappings and health-check configurations to support parallel development and production workloads on a single host.

- Deployed and operated a **Python-based AI microservice** (uvicorn/FastAPI) integrated into the platform architecture, supporting fraud detection workflows within the broader system.

## DevOps Engineer/Platform Engineer, *Bankina*

2025  
Lagos, Nigeria

- Architected and managed multi-environment Kubernetes infrastructure — self-hosted K3s for development and Azure AKS for production — enabling consistent, reproducible deployments across environments.
- Designed end-to-end CI/CD pipelines using GitHub Actions with OIDC-based federated authentication to Azure, automating the full build → push → deploy lifecycle with zero manual intervention.
- Authored reusable Helm charts with templated Kubernetes manifests and per-environment value overrides, ensuring configuration parity across dev, staging, and production.
- Authored reusable Helm charts with templated Kubernetes manifests and per-environment value overrides, ensuring configuration parity across dev, staging, and production
- Implemented zero-downtime deployment strategies using Helm atomic releases with automatic rollback on failure, and built self-healing logic to recover from stuck Helm release states.
- Configured Traefik ingress with HTTPS enforcement and automated TLS certificate provisioning via cert-manager and Let's Encrypt.
- Containerized applications using multi-stage Docker builds with health checks, non-root execution, and optimized layer caching for minimal production image footprint.
- Set up horizontal pod autoscaling (HPA) based on CPU and memory thresholds to dynamically scale workloads under variable traffic.
- Managed container image lifecycle on Azure Container Registry (ACR) with commit-SHA tagging and secure image pull secret provisioning across namespaces.
- Automated remote server bootstrapping (K3s, kubectl, Helm) via SSH as part of the CI/CD pipeline for the development environment.

## Internship (Devops), *KodeCamp*

2023

- Deployment of KodeHauz website using Ansible.
- Setting up SonarQube Scanner for Code Analysis.
- Streamlining Software Development and Deployment.
- Monitoring and Logging.
- **Dispose project (Final Project)**
  - Developed a CI/CD pipeline using GitHub Actions to automate the building, testing, and deployment processes for both frontend and backend applications to Amazon ECR and EKS.
  - Integrated ArgoCD for continuous delivery, allowing for efficient management of application deployments and updates.
  - Implemented Grafana for monitoring application performance and infrastructure health, enhancing observability in the deployment process.
  - Provisioned the underlying infrastructure, including VPC, EKS, and ECR, using Terraform, ensuring a reproducible and scalable environment.
- **Key Projects:**
  - **Frontend and Backend CI/CD Pipeline** ☑
  - **VPC, EKS, and ECR Infrastructure Setup** ☑
- **CI/CD Pipeline**
  - Set up a CI/CD pipeline using GitHub Actions to automate the deployment of an application from a GitHub repository to a Minikube cluster running on an AWS EC2 instance.
  - Provisioned infrastructure using Terraform, ensuring a scalable and reliable environment for running the Minikube cluster.
  - Containerized the application using Docker to facilitate smooth deployment and environment consistency.

### Key Project:

- **CI/CD Pipeline for Minikube on AWS EC2** ☑
- **Terraform Infrastructure.**
  - Set up a basic AWS infrastructure using Terraform, including VPC, subnets, route tables, internet and NAT gateways, security groups, and network ACLs.
  - Configured EC2 instances with NGINX and PostgreSQL installed via user data scripts, enabling automated server setup.
  - Ensured a scalable, secure, and efficient cloud environment for hosting web applications.

- **Key Project:**
- **AWS Infrastructure Setup with Terraform** 

### **System Admin, System spec Deelaa**

2023

- Develops, maintains and troubleshoots the network connections of cloud computing resources.
- Maintaining of services hosted on cloud server.
- configuring and managing of Network equipment such as Routers, switches, access point
- Install and configure computer hardware operating systems and applications.
- Monitor and maintain computer systems and networks.
- Talk field staff or clients through a series of actions, either face to face or over the telephone to help set up systems or resolve issues.
- Troubleshoot system and network problems and diagnose and solve hardware or software faults.

### **Network Administrator/Windows Server Administrator, TJ Resource LTD**

2020 – 2022

- Configuring and Managing of Cisco and Juniper Routers and Switches
- Windows server Admin
- Configuring & Managing of Access Point
- Configuring & Managing of Sophos Firewall
- Managing and Designing of LAN, WLAN, WAN.
- Network Hardware (cabling)
- Computer Hardware and Software Configurations and Troubleshooting
- Help Desk
- IP Surveillance

### **Internship, TIA Technologies LTD**

2018 – 2019

- IP Surveillance
- LAN Cabling
- UPS Installation
- Solar and Inverter Installation
- Maintenance

## **EDUCATION**

---

### **Higher National Diploma, Electrical/Electronic Engineering (Power and Machine Option), Lagos State Polytechnic, Ikorodu, Lagos State**

2016 – 2018

### **ND (National Diploma) in Electrical/Electronic Engineering, Lagos State Polytechnic, Ikorodu, Lagos State**

2011 – 2013

### **Desktop publishing, Computer hardware and software (CHS)**

2010 – 2011

## CERTIFICATES

- KCNA: Kubernetes and Cloud Native Associate (The Linux Foundation) [↗](#)
- LFS157: Introduction to Serverless on Kubernetes [↗](#)
- DevOps Engineer (Kodecamp, Udemy)
- Computer Hardware (Aptech computer institute)
- Window Server Administrator (Aptech Computer Institute)
- Linux Server Administrator (Udemy)
- Microsoft Office Suite (Excel, Word, PowerPoint and Access)
- LFS250: Kubernetes and Cloud Native Essentials [↗](#)
- LFS151: Introduction to Cloud Infrastructure Technologies [↗](#)
- Cisco Network Administrator 200 - 301 (Deft Rain Institute)
- Cisco Network Administrator 200 - 301 (Aptech Computer Institute)
- Database Administration (Aptech computer institute)
- Zabbix Application and Network Monitoring (Udemy)
- Health safety and environment LEVEL 1, 2 and 3
